

Course Plan for CSC-206: Software Engineering Syllabus

General Information

Course Number	CSC-206
Credit Hours	3+0 (Theory Credit Hour = 3, Lab Credit Hours = 0)
Prerequisite	None
Course Coordinator	Not Specified

Course Objectives

This course is specially designed for students who have knowledge about computers and have good programming skills and want to enhance their level of understanding for software development and analysis. During this course the students will study the software engineering process models, requirements engineering process, and system models. Furthermore, they will learn methods, tools, notations, and verification and validation techniques for the analysis and specification of software requirements.

Catalog Description

SWE-201

Mode of Delivery

Synchronous and Asynchronous mode of Lectures

- PDF Slides of every lecture will be uploaded on created class group after the commencement of lecture
- Interactive session will be conducted as per timetable

Assessment Criteria:

Interactive Mode of Class		
1.	Class Participation/Activities	10%
2.	Class Project/Assignments	20%
3.	Mid-Term Exam	30%
4.	Final Exam	40%

Course Learning Outcomes

	Course Learning Outcomes (CLO)
1	Understand the basics of software engineering and develop ability to select appropriate software process models to use in a particular situation
2	Develop ability to understand software requirement and software development models
3	Understand basics of software testing and evaluation along with recommended guidelines for effect conduct of both activities

CLO-SO Map

	SO IDs									
CLO ID	GA1	GA2	GA3	GA4	GA5	GA6	GA7	GA8	GA9	GA10
CLO 1	1	0	0	0	0	0	0	0	0	0
CLO 2	0	1	0	1	1	0	0	0	0	0
CLO 3	0	0	0	1	1	0	0	0	0	0

Assessment of Course Learning Outcomes

	Course Learning Outcomes (CLO)	Teaching Strategy	Assessment Methodology
1	Understand the basics of software engineering and develop ability to select appropriate software process models to use in a particular situation	Interactive Live Session	Class Tests
2	Develop ability to understand software requirements and software development models	Interactive lectures with Case based learning	Class Tests/Assignments
3	Understand basics of software testing and evaluation along with recommended guidelines for effect conduct of both activities	Interactive lectures with Case based learning	Class Tests/Assignments

Text Book

1. Software Engineering by IAN SOMMERVILLE, Latest Edition, Pearson Education Ltd.

Reference Material

1. Software Engineering, A Practitioner's Approach by ROGER S. PRESSMAN

Course Content

Week No.	Topics	Suggested Readings (Chapters)
1-2	Introduction to Software Engineering	SOMMERVILLE: Chapter 01 PRESSMAN: Chapter 01
3-5	Software Processes	SOMMERVILLE: Chapter 02 PRESSMAN: Chapter 04
5-7	Agile Software Development	SOMMERVILLE: Chapter 03
8	Requirement Engineering	SOMMERVILLE: Chapter 04 PRESSMAN: Chapter 10
9-10	Mid Exam	
11	Requirement Engineering	SOMMERVILLE: Chapter 04 PRESSMAN: Chapter 10
12-13	System Modeling	SOMMERVILLE: Chapter 05 PRESSMAN: Chapter 12
14-15	Architectural Design	SOMMERVILLE: Chapter 06 PRESSMAN: Chapter 14
16-17	Software Testing	SOMMERVILLE: Chapter 08 PRESSMAN: Chapter 17, 18

17-18	Software Evolution	SOMMERVILL: Chapter 09	
19	Quick Recap of the course		
20-21	Final Exam		

Instructor Contact Details

For any course related quires registered students can contact via email [or](#) on LMS forum.
