

Difference between Intranet and Extranet

November 2025

Prepared by: Rashida

The diagram is set against a dark navy blue background. It features a large yellow circle in the center-left. Inside this yellow circle is a smaller purple circle. To the right of the yellow circle, a pink circle overlaps its edge. The text 'Your business' is in the yellow circle, 'Intranet' is in the purple circle, and 'Extranet' is in the pink circle. There are also several small decorative elements: a purple circle, a light green circle, a pink triangle, an orange triangle, and a green starburst.

Your business

Extranet

Intranet

Introduction

- As the world becomes a global village, organizations must communicate and collaborate effectively.
- Tools like Intranets and Extranets ensure smooth information flow and interactivity.
- Understanding their differences improves efficiency and secure access.

What is an Intranet?

- A private network owned by a single organization.
- Used for internal communication and information sharing.
- Accessible only with valid username and password.
- Examples: Employee directories, HR portals, internal announcements.

Advantages of Intranet

- Enhanced Communication: Streamlines inter-departmental communication.
- Centralized Information: Easy access to key documents and data.
- Increased Productivity: Saves time locating information.
- Secure Environment: Restricted to internal users.

Disadvantages of Intranet

- Maintenance Costs: Requires regular updates and fixes.
- Limited Accessibility: Only available within the organization.

What is an Extranet?

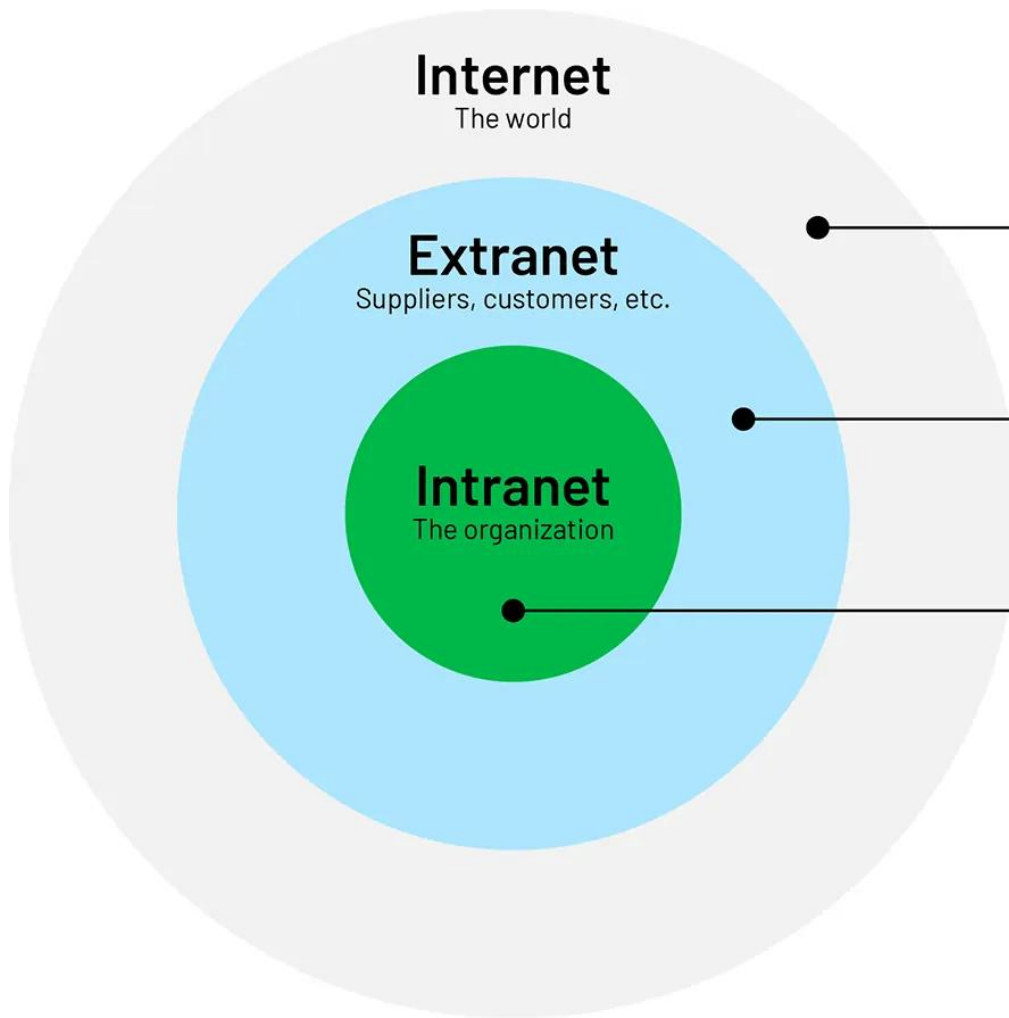

- A private network connecting internal and external stakeholders.
- Managed between organizations under a contract.
- Accessible with authorized login credentials.
- Used for data sharing, order placement, and communication.

Advantages of Extranet

- Improved Collaboration: Enables external partnerships.
- Secure Data Sharing: Controlled access for vendors and partners.
- Cost-Effective: Reduces physical meetings and paperwork.

Disadvantages of Extranet

- Complex Setup: Requires proper design and planning.
- Security Risks: Vulnerable if not well-protected.

Internet

The world

Extranet

Suppliers, customers, etc.

Intranet

The organization

The **internet** creates connections between computers around the world

An **extranet** creates connections beyond (or outside) an organization.

An **intranet** creates connections inside an organization.

Intranet vs Extranet

- Intranet: Single organization, Internal access, Internal info sharing, Managed by one organization.
- Extranet: Multiple organizations, External access, Shared info between partners, Managed jointly.

Additional Differences

- Intranet is derived from Internet; Extranet is derived from Intranet.
- Intranet is limited to internal users, while Extranet extends to partners and clients.
- Intranet = Internal efficiency.
- Extranet = External collaboration.

Conclusion

- Both networks are vital for modern organizations.
- Intranet: Internal sharing and coordination.
- Extranet: Extends collaboration beyond the organization.
- The choice depends on organizational needs and security requirements.
