

What is a Research Question?

- A research question is a question that a research project aims to answer.
- Research question often addresses an issue/problem facing an organization or society.
- Through analysis and interpretation of data, research questions are answered in research conclusion.
- A research question pinpoints exactly what you want to find out through your research and it also gives your research work a clear focus and purpose.

How to Develop Good Research Questions?

- A good research question need to be Clear & focused, Researchable, feasible, specific, ethical, relevant, not too easy not too difficult etc.
- How to create a good research question (1. Determine the requirements, 2. Choose a topic, 3. Conduct preliminary research, 4. Narrow down your topic, 5. Write your question)
- A good research question example:
- *How have family planning programs and parent's education levels affected the rate of childbirth in USA among 25 to 30 years old adults?*

Research Question Should be.

1. **Focused**
2. **Clear**
3. **Researchable**
4. **Should not be Narrow**
5. **Should not be too broad**

1. Brain Storming
2. Meet with Supervisor
3. Deep Literature Study
